Re: Leeds

Our castings are made with metal melted electrically using induction furnaces. We use various materials and alloys to produce these parts. All of the recycled material that we use is listed below and is “pre-consumer” recycled material.

If the castings are produced in Gray iron:

Steel	55 %
Graphite	3 %
Re-melt	<u>39 %</u>

Total Recycled material: 97 %

If the castings are produced in Ductile iron:

Steel	31 %
Graphite	4 %
Re-melt	<u>16 %</u>

Total recycled material: 51 %

If more information is needed, please contact sales@kentfoundry.com

Thank You,

Kent Foundry Co.
